Comment. As this type of report was furnished after a two-month interruption no comparable data are available. The report indicates a total of 32,140 cars loaded per day. This high figure is due to peak traffic in fall. The 438 cars per day claimed by the Soviet occupation forces, roughly correspond to the level of 500 cars which is considered normal during winter months. Increased traffic on some days in individual railroad districts probably resulted from the shipment of dismissed personnel to the USSR in connection with the current personnel exchange program of the GCFC.
